# Senior Reservoir Engineer

## Project Manager

### Job Overview

Beicip-Franlab is a world leading consulting Company providing software and services to help oil and gas professionals in interpreting subsurface data and assessing exploration and production risks and opportunities.

Beicip-Franlab core activity is to help oil and gas professionals in interpreting subsurface data and assessing exploration and production risks and opportunities. The successful candidate will be expected to manage an integrated project team composed of geophysicists, geologists and reservoir engineers. Strong technical and analytical skills are also expected in order to conduct detailed analysis of production performance, build and use dynamic simulation models and propose optimized field development plans including EOR schemes to clients worldwide. The candidate will use the Company's innovative reservoir simulation software as well as other standard industry tools.

The successful candidate will be reporting directly to the Reservoir Engineering Department Manager and will be based in our main office in France near Paris or in some international locations such as the Middle East, South America or Africa.

# Responsibilities

Acting as Senior Reservoir Engineer, the successful candidate will be expected to:

- perform analytical reservoir engineering analysis and dynamic simulation studies (model initialization, history matching and performance prediction)
- work actively in and/or manage an integrated project team
- interact with the Client for data collection, results presentation and discussion
- apply new methods and be creative in field development or redevelopment, using leading edge technologies and tools
- promote integration between geological, reservoir and geophysical techniques in order to deliver powerful predictive models to meet current production challenges
- coach Junior Reservoir Engineers in their daily work

This is an ideal role for an experienced, innovative and ambitious reservoir engineer who wishes to be actively contributing to successful development projects.

# Preferences

The successful candidate will have:

- An MSc or PhD in Petroleum/Reservoir Engineering
- Minimum of 10 years' experience in reservoir engineering
- Strong skills in reservoir simulation (at least 5 years of experience)
- Strong interpersonal and communication skills, written and oral, an essential
- A confident and assertive personality with the ability to provide effective technical leadership and articulate strong technical arguments, an essential
- Previous experience in publishing and presenting technical papers, a major advantage
- Previous overseas experience, an advantage
- Fluent English mandatory. Spanish/French, an advantage
- Commitment for mobility as the job may include short and long-term missions overseas

# Career

- Project Manager of an integrated exploration or field development project
- Team Leader of a group of reservoir engineer specialists
- Expert in Reservoir Engineering (simulation, reserves evaluation, ...)
- Business Development Manager
- Software support and sales specialist

# Package

This position will be well rewarded and will include bonuses as well as personal training opportunities and other benefits.
