

# Consultant in **Geology**

- More than **20 nationalities**
- Presence in over **100 countries**
- Several expatriations opportunities and **missions abroad**
- Collaboration with international **experts**
- Innovative and unique solutions to match **clients' challenges**
- Challenging projects demanding the **highest technical expertise**
- Multidisciplinary integration through **teamwork**
- Development of **highly specialized** skills
- Career path fitting your skills and interests

## **GEOLOGY ENGINEERING**

Teams involved in the Department of Geology

- **Reservoir Characterization & Evaluation Team**
- **Integrated Geomodeling Team**
- **Exploration, Fluids & Basin Modeling Team**
- **Stratigraphy & Petrography Team**
- **Structural Geology & Fractured Reservoir Team**

## Responsibilities

**Geologist's activity encompasses**

- Reservoir characterization and reservoir modeling
- Performing and managing petroleum system modeling studies at sedimentary basin scale
- Performing integrated studies, from data management to 3D static reservoir models
- Leading or working directly with a dedicated team of petrophysicists, sedimentologists, geomodelers, geophysicists, and reservoir engineers
- Contributing to field development plans
- Evaluating plays and prospects on both operated acreage and new venture projects

## Career Evolution

Within this framework, we propose ongoing on-the-job training, which constantly opens evolution opportunities to our geologists.

**Beicip-Franlab offers tailor-made career evolutions and some international positions to each individual, depending on his/her skills, talents and wishes, such as:**

- Manager of exploration or field development integrated projects (on site or abroad)
- Team Leader for petrophysicists, reservoir/basin geomodelers, sedimentologists or fractured reservoir specialists
- Specialized expert in reservoir or exploration geology (geostatistics, carbonate petrography, petroleum system analyst...)
- Business Development Manager
- Software support and sales specialist

# 66 Testimonials

## Frédérique • Expert Geologist

### Graduated from:

- Institut National Polytechnique de Lorraine, PhD in Mathematical Geology
- IFP School, Master degree in Petroleum Geology
- Ecole Nationale Supérieure de Géologie de Nancy (France), Master degree in Applied Geology

### WHY BEICIP-FRANLAB?

After more than 20 years in R&D at Elf Aquitaine and at IFP Energies Nouvelles in reservoir geosciences (geological modeling, seismic characterization of reservoirs and geomechanics), I wanted to do a "more hands-on job", and apply the expertise acquired to industrial issues.

### COULD YOU DESCRIBE YOUR JOB?

From a technical standpoint, I coordinate teams performing field integrated studies on deposits. Technically, I am responsible for the project, and for exchanges with the client. Furthermore, I am in charge of meeting project targets and keeping the project on schedule and providing technical expertise. Finally, I am ready to pass on my experience and know-how to my colleagues and to our clients when the projects include a "training" commitment.

### WHAT DO YOU APPRECIATE IN YOUR JOB?

What I enjoy above all is doing projects that meet very specific industrial challenges, and the "foreman" side of the project manager job. I also like the technical diversity of the issues encountered, and the human diversity of the project teams I have had to manage and the contacts with clients. In all, I find the transmission of know-how very important.

### HOW DO YOU EXPECT YOUR EVOLUTION IN THE COMPANY TO BE?

In the coming years, expertise in oil geosciences will still be in great demand and I am not worried about the needs there will be in this field. My mixed profile "Project Manager"/Expert enables me to envisage the future as a continuation of today or to look for a position as technical director or R&D director.

## Stéfan • Senior Sedimentologist/ Geologist, Stratigraphy and Petrography Team Leader

### Graduated from:

- University of Burgundy, Dijon (France), PhD in Sedimentology

### WHY BEICIP-FRANLAB?

After completing a post-doctoral internship at the CNRS in partnership with Total, in the field of applied research on carbonate reservoirs in the Middle East, Beicip-Franlab gave me the opportunity to start a career in the oil industry in 2007, offering a position in the department of geology as a sedimentologist stratigrapher.

### COULD YOU DESCRIBE YOUR JOB?

I provide technical expertise in sedimentology and stratigraphy to national and international oil companies. As well as my consulting work, I manage and coordinate teamwork in integrated projects in both production and exploration. This position implies frequent exchanges with other disciplines in geology, geophysics and reservoir engineering. I also ensure the smooth daily running of the work for around ten geologists in the team.

### WHAT DO YOU APPRECIATE IN YOUR JOB?

The huge diversity of technical subjects dealt with in the projects is one of the major attractions of my job. Each new project opens up my geological and oil culture, stimulates my scientific curiosity and makes me want to understand, learn, share and transmit. Beyond the technical considerations, one fundamental aspect is the constantly new and enriching relationships I share with my clients.

### HOW DO YOU EXPECT YOUR EVOLUTION IN THE COMPANY TO BE?

Over the coming years, I see two careers opening up at Beicip-Franlab: technical management and professional expertise. For the moment, I have not decided on a specific career as my job is currently shared between team leading responsibilities and technical responsibilities.
